Subject Index

BR – Book Review
MR – Meeting Report

A
Abzymes 386 *(MR)*
Acetopyruvate, chemical/enzymatic hydrolysis 294–295
Acinetobacter calcoaceticus, Baeyer–Villiger monooxygenase (BVMO) 55, 56
Acyl-ACP thioesterase gene, fatty acid changes in engineered plants 443 *(MR)*
Acyl carrier protein, in nonribosomal peptide synthesis 117 *(MR)*
N-Acyl-homoserine lactone (AHL) 458
  applications 462–464
  cryptic gene activation 462
  expression systems regulated by 462–464
  phenotypes in specific organisms 459
  signalling mechanism 458–464
Adenoviruses, DNA integration into host genome 297, 298
Adjuvants, S-layers role 24
Adriamycin, liposomal 219
Adsorption, expanded-bed, *see* Expanded-bed adsorption
Aeromonas salmonicida 131–134
  characteristics 132
  control 131, 133–134
  detection methods 132–133
  in vivo growth model 133
  survival and conditions for 132–133
  transmission 133
  vaccine 133–134
Affinity cell separations 249–255
  binding cooperativity 250
  design considerations 253–254
  elution/recovery stage 252–253
  loading stage 251–252
  washing stage 252
Agaroses 9
  properties and applications 11
  sources/composition 10
Agars 9
  bioassay for G-protein-coupled receptors 490–492
  properties and applications 11
  sources/composition 10
Agricultural biotechnology
  antibody technology applications 42
  Australian symposium 86–87
  food security 336–338 *(MR)*
  regulations 337–338 *(MR)*
  technology transfer and funding 338 *(MR)*
Agrobacterium tumefaciens
  N-acyl-homoserine lactone (AHL) 459
  transformation of plants with *Bacillus thuringiensis* genes 174, 175
AIDS, therapy
  Australian symposium 86 *(MR)*
  HIV integrases 167–172
  see also HIV integrase
Alanine aminotransferase, in hepatitis C 72–73
Alfalfa, improvements 331 *(BR)*
Algins/alginates 9, 10
  properties and applications 11
  sources/composition 10
Alkaline phosphatase, chimera with membrane protein 435
Alkaloids, biosynthetic pathways in plants 442 *(MR)*
Allele-specific amplification (ASA) 451
Alveolar macrophage, depletion, effects 182–183
Alzheimer's disease
  genetics-based approach for drug target identification 42 *(MR)*
  transgenic animal models 320–322
Amino acids
  artificial, in membrane proteins 434
  nonessential, in animal cell culture 109–110
Ammonia, accumulation in fed-batch cultures 110
Amperometry-based sensors, microfabrication/micromachining application 215
Amplification-refractory mutation assay (ARMS) 448, 451–452
α-Amylase 349–352
  inhibitors, as plant defence proteins and pest resistance 4–6
Amylopectin 208, 209
  crystallization 211, 212
Amylose 208, 209
  crystallization 211
Amyotrophic lateral sclerosis
  drug delivery using encapsulated living cells 416
  transgenic animal models 323–324
Analytical biotechnology
  atomic force microscopy, *see* Atomic force microscopy
  ultrasonic separations 506–511
  see also other specific techniques
Animal(s)
  laboratory, patenting 125
  patenting 124–125
  stress response and MAPK cascades 16
Animal cell(s), technology 275 *(BR)*
Animal cell culture
  cell growth and factors affecting 110–111
  fed-batch, balanced nutrient composition 111
  media for fed-batch cultures 109–113
  see also Cell culture
Animal models
  metastasis research 239–241
  monoclonal antibody product development 89
  see also Transgenic animals
Antibiotics
  bactericidal 336
  novel approaches 334–336 *(MR)*
  resistance 334 *(MR)*
Antibodies
  agricultural applications 42 *(MR)*
  antiviral, applications 41 *(MR)*
  biochemical engineering 383 *(MR)*
  bispecific 42 *(MR)*
  complementarity determining regions (CDRs) 64, 66, 69
  crystal structure 41 *(MR)*
  cytotoxic activity, in agriculture 42 *(MR)*
  engineering, practical aspects 276–277 *(BR)*
  expression systems and glycosylation 30
  fragments, surface display on bacteria 189–190, 191
  from camels 41 *(MR)*
  glycosylation
    cell culture systems effect 31
    effect on function 26–32
    factors affecting 30–31
    mutants 30
    protein conformation effect 30–31
    role in IgG function 27–28
  high-affinity, phage-library-based strategies 41–42, 62–70
  libraries 41–42, 62–70
    see also Phage antibody libraries
  lipid-coated catalytic 52–53
  market size 383
  passive immunization 365–366
  phage libraries, *see* Phage antibody libraries
  recombinant
    in agriculture 42 *(MR)*
    clinical applications 157 *(MR)*
    environmental applications 42 *(MR)*
    expression 41 *(MR)*

for intracellular targeting 157 *(MR)*
transgenic plants 42, 444 *(MR)*
structure 26–27
see also Humoral immune response; Immunoglobulin; Monoclonal antibodies
Antibody-dependent cell-mediated cytotoxicity (ADCC) 27
effect of altered carbohydrate structure on IgG 29
Antibody-directed enzyme–prodrug therapy (ADEPT) 240–241
Anticancer drugs/therapy, *see* Cancer
Antifreeze proteins, from marine organisms 130
Antigens
expressed in recombinant BCG 513–514
sources and delivery systems, immunization 483
Antimicrobial chemotherapy
novel approaches 334–336 *(MR)*
see also Antibiotics
Antimonite, detection by bacterial biosensors 504–505
Apoptosis, Fas-mediated, abnormal in SHP-1 deficiency 305–306
Arbitration, intellectual property dispute resolution 484–486
Archaea

Intestinal microflora 270, 271
identification of individuals by 272
probiotic effect 270, 273
Intrabodies 157
In vivo mutagenesis, plants 441 *(MR)*
Ion channels, expression in yeast, drugs modulating 1–3
Iontophoresis 288
'reverse' 289–290
transdermal therapy/diagnosis 288–290
Iron-regulated outer-membrane proteins (IROMPs) 133
Isomerization, dextroses 352
Isooctane, esterification catalysed by lipid-coated lipase 51
Isoporous ultrafiltration membranes, S-layers as 22
Isotopic tracers, metabolic flux determinations 308

J
John Moore case (patent) 126

K
β-Ketolases 291–296
acetopyruvate hydrolysis 294–295
heteroatom-bond hydrolases comparison 291–293
potential role in synthesis 293–294
purification 294
role and distribution 291–293
β-Ketones, vinylogous, hydrolysis 295–296
meso Ketones, Baeyer–Villiger monooxygenase biotransformation 58
Kinetic modelling, control of metabolic flux 445
Kinetics
biomolecular interactions at surfaces 355–356
waste water treatment 280 *(MR)*
Knockout mice 43 *(MR)*
Kupffer cells
nanoparticle uptake 218
role, depletion and effects 181

L
Labelling, PUFA-fortified foods 407–408
lacA promoter, lactic-acid bacteria gene expression 136
Lactate, accumulation in fed-batch cultures 110
Lactic-acid bacteria
controlled overproduction of proteins 135–140
probiotic properties 270–274
regulated gene expression systems 135–136
applications 139–140
dnaJ-promoter based 136
lacA-promoter based 136
*m*31-middle-promoter and *ori* system 137
nisA/*nisF*-promoter based 138–139
PA170–promoter based 137
prtP-promoter based 137
repressor/operator of *m*r1t-based 137
sodA-promoter based 136–137
tryptophan controlled 137
xylA-promoter based 137
strains used as probiotics 272–273
in yoghurt 270, 273
Lactobacillus
comparison with bifidobacteria 273
strains used as probiotics 272–273
Lactococcus lactis, inducible expression systems 136–139
Langmuir–Blodgett method 395
Langmuir–Schaefer method 395
Latex agglutination tests (LATS), ultrasonic-standing-wave enhancement 509–510
Laurate rapeseed, acyl-ACP thioesterase gene in 443
Legumes, forage, improvements 331 *(BR)*
Levan sucrase, overexpression in plants 442
Libraries, *see* Combinatorial libraries; Peptide libraries; Phage antibody libraries
Ligands, targeting 217
Ligase chain reaction (LCR) 451
Lignin, biosynthesis 443
Lipase
definition 32–33
enrichment of polyunsaturated fatty acids 470–471
interfacial activation 32–38
lipid-coated, enantioselective esterification catalysed 51
Lipid, synthesis in plants, genes/control 443
Lipid-coated catalytic antibodies 52–53
Lipid-coated enzymes
as catalysts in organic media 50–54
β-D-galactosidase 53–54
lipase 51
Lipid–DNA complex 54
Lipid membrane, S-layers as supporting structures 24
Lipophilic cations
accumulation by mitochondria 326–327, 328
as anticancer drugs 327
targeting of compounds to mitochondria 327
Liposomes
adriamycin in 219
drug delivery to nervous system 411
drugs encapsulated, macrophage function suppression 178–185

phagocytosis by macrophage 179–180
S-layer coated 24, 25
'stealth' 219
Lipoxygenase, bioconversions of polyunsaturated fatty acids 472–473
Liquid chromatography 418
mass spectrometry with 421
Lithium therapy, manic depression 121 *(MR)*
Local fitness landscapes, enzymes 528–529
Lou Gehrig's disease, transgenic animal models 323–324
Lymph nodes, targeting using nanoparticles 222–223
Lysophospholipids 91
Lysosomal enzymes, production in transgenic tobacco 444 *(MR)*

M

Machado–Joseph disease, transgenic animal models 324
Macroalgae, marine 10
callus culture and plant regeneration 12–13
gene mapping/sequencing 13
polysaccharides, *see* Seaweed polysaccharides
protoplast formation 12–13

applications 91
bilayer formation, surface plasmon resonance 356
biocatalysis 95–96
enrichment of mixtures by phospholipase D catalysis 94
enzymatic modification 91–92
modification of
acyl chain at *sn*1 position 92
acyl chain at *sn*2 position 92–93
natural/unnatural polar heads 94–95
polar head 93–94
modification using phospholipases 90–96
synthetic *vs* biocatalysis 91
polyunsaturated fatty acid biotransformations 472
4′-Phosphopantetheine 117 *(MR)*
Photobacterium fischeri, *N*-acyl-homoserine lactone (AHL) 459
Pichia pastoris, G-protein-coupled receptor expression 489
Picoplankton 205
Planktonic microorganisms 205
Plants
alkaloid biosynthetic pathways 442 *(MR)*
antibody expression systems 41 *(MR)*
glycosylation 31
as bioreactors for biopharmaceuticals 45–50
carbohydrate biosynthesis and regulation 442–443 *(MR)*
cell-wall polymers 443 *(MR)*
defences
pest adaptation to 4–6
signal transduction pathways in 441–442 *(MR)*
engineering, *Bacillus thuringiensis* genes 173–177
gene nomenclature 8
genes for lipid synthesis 443 *(MR)*
gene suppression and disruption 441 *(MR)*
genetic manipulation of biosynthetic pathways 442 *(MR)*
genome sequencing 201
new oils synthesis 443 *(MR)*
ozone tolerance 442 *(MR)*
patenting 124
polyketide-forming enzymes 119
products, biochemical engineering 383
protein engineering 443–444 *(MR)*
recombinant DNA, USDA regulation of field trials 387–389
shoot–root allocation and nitrate signal 442 *(MR)*
stress response
carbohydrates role 442
MAPK-like cascades 17–18
upregulation of protein kinases 15–19
transgenic, *see* Transgenic plants
as vaccine factories 483–484 *(MR)*
Plant viruses
biopharmaceutical production 46
as episomal vectors 444 *(MR)*
as epitope delivery system and vaccine development 46
Plasmid DNA
delivery, gene therapy 220, 221
nanoparticle formation 221
targeting to hepatocytes using nanoparticles 220
Plasmids, *Streptomyces lividans* 317–318
Plastics
biodegradable 208
see also Starch plastics
polyhydroxalkanoates from marine prokaryotes comparison 393–394
PLGA formulations, vaccines 366
Plug-flow behaviour 264, 265
Polkinghorne Committee, ethics of patenting animals 125
Pollutants
flow injection analysis application 79
organic, removal using recombinant antibodies 42 *(MR)*
see also Bioremediation; Metals
Polyhydroxalkanoates
carbon storage in marine prokaryotes 393
properties and compatibility to plastics 393–394
Polyketide
biosynthesis 118
synthesis 293
Polyketide synthases 117, 118 *(MR)*
Polymerase chain reaction (PCR)
amplification-refractory mutation assay (ARMS-PCR) 451–452
differential-display reverse-transcriptase (DDRT-PCR) 454
hepatitis C virus RNA detection 75
mutations, detection by capillary electrophoresis 450–451
quantitative reverse-transcriptase (QRT-PCR) 453–454
short tandem repeat (STR-PCR) 451–452
techniques 237 *(BR)*
transgene detection in plants 141–142
Polymerase chain reaction (PCR)–restriction fragment length polymorphism 450–451
Polymeric-controlled release systems, vaccines 364–369
Polysaccharides, from red seaweeds, *see* Seaweed polysaccharides
Polyunsaturated fatty acids (PUFAs) 401–409
applications 470–478
pharmaceutical/nutraceutical 407–408
bioconversions 472–473
biological functions 405–406
biotransformations 470–478
hydrolase-mediated 470–472
lipase-mediated 470–471
oxidative 472–473
products and applications 408
eicosanoid synthesis 475–476
hydroperoxide-derived aromas and flavours 473–475
hydroxyacids and oxylipin synthesis 475–476
interconversions 403
lipase-catalysed enrichment 471
in nutrition and disease 406–407
occurrence 401–405
ω-3 and ω-6 404
production 401–405
structures 402
synthetic intermediates 476
types 401
Post-transcriptional regulation, gene expression 480 *(BR)*
Potassium channels, inwardly rectifying, expression in yeast 1–3
Potatoes
Bacillus thuringiensis toxin expression 173, 174
Norwalk virus capsid protein expression 443–444 *(MR)*
Preclinical development, monoclonal antibody products 89
Prion diseases, transgenic animal models 322–323
Prion proteins 322–323
Probiotic properties, lactic-acid bacteria 270–274
Probiotics 270
effect on immune system 273–274
lactic-acid bacterial strains 272–273
Lactobacillus, comparison with bifidobacteria 273
products for farm animals 273

Protease
expression downregulation in *Aspergillus* 259–260
fungal, effect on heterologous protein formation 256–263
toxic, overexpression in mycoinsecticide 84
Protease inhibitors
as plant defence proteins and pest resistance 4–6
recombinant, prevention of pest resistance to plant defences 5–6
Protease-mediated resistance, to defence proteins by herbivorous pests 4–6
Protein engineering
directed enzyme evolution 523–530
enzymes 385
plants 443–444 *(MR)*
Protein kinases
in MAPK cascade 15
mitogen-activated, *see* Mitogen-activated protein kinase (MAPK)
Protein membranes, S-layers as 20, 24
Protein monolayers
engineering
application to biocatalysis 398–400
future prospects 399–400
immobilization technique comparison 397–398
thermostability and long-term protection 396–397
formation 395–396
Proteins
aggregation, biochemical engineering 383
analysis by mass spectrometry 194–195 *(BR)*
cold-adapted 361–362
Fc chimeric 155
folds, counting 147–151
formation in *Aspergillus* and protease problem 256–263
heterologous
expression in *Aspergillus* 256–263
expression in *Streptomyces* 315–320
identification using tandem mass spectrometry (MS/MS) 418–425
importing into mitochondria 327–330
membrane, *see* Membrane proteins
nonspecific adsorption, surface plasmon resonance 355
overexpression by lactic-acid bacteria 135–140
recombinant, protocols 438–439 *(BR)*
recovery from fermentation broths 230–235
see also Expanded-bed adsorption
sequence analysis, tandem mass spectrometry 418–425
spatial arrangements of backbone fragments (SARFs) 150–151
structure 147–148
classification schemes 148
global analysis 148–150
prediction 380–381 *(BR)*
SCOP and CATH classifications 148
synthesis by bacteria, antibiotic target 335 *(MR)*
targeting in transgenic plants 444 *(MR)*
topology 148, 150
Protein-tyrosine-phosphatase deficiency in 'motheaten' mice 303
Proteolysis, by pest proteases in plants 4–5
Protoplasts
fusion, marinë macroalgae 13
marine macroalgae 12–13
prtP promoter, lactic-acid bacteria gene expression 137
Pseudomonas aeruginosa, *N*-acyl-homoserine lactone (AHL) 459
Public health, Brazil 286
Pulmonary disease, surfactant genes, experimental model 87 *(MR)*
Pulsed-field capillary electrophoresis (PFCE) 449, 455
Pulsed-field gel electrophoresis (PFGE) 455
Pyruvate, metabolism in yeast 446 *(MR)*

Q

Quantitative reverse-transcriptase PCR (QRT-PCR) 453–454

R

Racemic temperature, concept and application 333
Rapeseed
acyl-ACP thioesterase gene in 443 *(MR)*
high-stearate 443 *(MR)*
Rational drug design 120
antibiotics 334
Recombinant immunoblot (RIBA), anti-HCV assays 74
Red blood cells, development, abnormalities in SHP-1 deficiency 306
Redox enzymes, electrochemical regeneration 495–500
Red seaweed, polysaccharides, *see* Seaweed polysaccharides
Regulations
agricultural biotechnology 337–338 *(MR)*
Bacillus thuringiensis crops 175–176
environmental release of genetically-modified organisms 345
field trials of recombinant DNA-modified plants 387–389
International Conference on Harmonization 87 *(MR)*
Relaxin, patent case 126
Reporter genes, bacterial biosensors for detecting toxins 501
Restriction fragment length polymorphisms (RFLPs) 378–379 *(BR)*
mutation detection 450–451
Retroviruses, vectors for cancer gene therapy 87
Reverse transcription polymerase chain reaction (RT-PCR)
HCV RNA detection 75
transgene expression studies in plants 144
Rheumatoid arthritis, drug target identification 43 *(MR)*
Rhinovirus, epitope expression on cowpea mosaic virus (CPMV) 444 *(MR)*
Ribozymes 386 *(MR)*
Rice
improved varieties 337 *(MR)*
Xa21 gene 441
Risk analysis, environmental release of genetically modified organisms 347–348
RNA
analysis, transgene expression studies in plants 144
mRNA metabolism 480 *(BR)*
Robotics
in bioprocess plants 383 *(MR)*
screening for microbial biocatalysts 121 *(MR)*
R proteins 463

S

Saccharification 350–351
Saccharomyces cerevisiae
genetic manipulation, ion channel expression 1–3
genome sequence 201
G-protein-coupled-receptor expression 487–494
stress response and MAPK cascade 16–17
Safety, environmental 342–349
Salicylic acid, signal transduction in plants 442 *(MR)*
Salmon, resistance to *Aeromonas salmonicida* 133
Salmonella carnosus 189
Salmonella gordinii 189
Salmonella typhimurium, surface display 188
Schizosaccharomyces pombe, G-protein-coupled-receptor expression 489
scid mice 239–241
cancer treatment studies 241
macrophage-depleted and survival of human cells 180–181
metastasis research 239–241
SCOP classification, protein structures 148
Seaweed, *see* Macroalgae, marine
Seaweed polysaccharide industry 9–14
barriers and overcoming 13–14
impact of research on 13
long-term R&D 11–13
short-term R&D 9–11
Seaweed polysaccharides 9–14
properties and applications 11
sources and composition 10
taxonomy 12
types of commercial importance 10
see also Macroalgae, marine
Seed proteins, biological value improvement 86
Semiconductor technology, S-layers in 23
Sequencing by hybridization (SBH) 465, 467
Serine/threonine kinases, mitogen-activated protein kinase (MAPK) 15
Serratia liquefaciens, *N*-acyl-homoserine lactone (AHL) 459
Severe combined immunodeficiency, mouse, *see scid* mice
Short tandem repeat (STR)-PCR 451–452
SHP-1, *see* Src-homology 2-domain phosphatase-1 (SHP-1)
Signal peptides, *Streptomyces lividans* 318
Signal transduction
bacterial *N*-acyl-homoserine lactone (AHL) system 458–464
G-protein-coupled receptor-mediated in yeast 488
plant defence responses 441–442 *(MR)*
stress pathway, mitogen-activated protein kinase (MAPK) 15–19
Silicon-based microfabrication/micromachining 213–216

Simian immunodeficiency virus (SIV), immunization 367–368
Single-cell manipulations, dielectrophoresis 429
Single-cell selection methods, biocatalyst development 122 *(MR)*
Single-strand conformation polymorphism (SSCP) 452–453
S-layer microparticles (SMPs) 22
S-layers
  applications (potential) 22–24
  in Bacteria and Archaea 20–26
  immobilization of functional molecules 22–23
  as isoporous ultrafiltration membranes 22
  liposomes coated by 24, 25
  structures 20–21
  subunits 21–22
  vaccine development 23–24
S-layer self-assembly products (SAPs) 22, 23
S-layer ultrafiltration membranes (SUMs) 22, 23
sodA promoter, lactic-acid bacteria gene expression 136–137
Software sensors, biomass determination 521–522
Solutions, computer modelling of reactions in 439 *(BR)*
Somatostatin receptor, G-protein-coupled 490–491
Southern hybridization, transgene detection in plants 142–143
Space, microgravity crystallization studies 197–200
Spatial arrangements of backbone fragments (SARFs) 150–151
Spinocerebellar ataxia type 1, transgenic animal models 324
Spleen, drug delivery using nanoparticles 222
Src-homology 2-domain phosphatase-1 (SHP-1)
  deficiency 303–307
    immunopathological abnormalities 303–306
    haematological abnormalities 306
    mutations 302–307
    NK-cell inhibitory receptors and 306
Stability
  enzymes, *see* Thermal stability, enzymes
  genetic, transgenic plants 46–47
Staphylococcus aureus, methicillin-resistant 334, 335 *(MR)*
Starch
  antibodies against proteins associated 442 *(MR)*
  liquefaction 349–350
  phosphate content 442 *(MR)*
  processing to sugar 349–352
  structure 208–209
    properties 211–212
    in starch plastics 210–211
  thermomechanical processing 209–210
Starch plastics
  crystallinity 208–213
  crystallization during storage 211
  polymer-chemical principles 210
  preparation 209–210
  products/applications 210
  properties 211–212
  starch structure in 210–211
Stereochemistry, racemic temperature application 333
Streptomyces, heterologous protein expression 315–320
Streptomyces coelicolor 316
Streptomyces lividans
  codon usage 318
  fermentation 319
  heterologous protein expression 315–320
  plasmid systems 317–318
  secretion signals and host factors for 318
Stress response
  in animals and MAPK cascades 16
  in plants and MAPK-like cascades 17–18
  upregulation of mitogen-activated protein kinase (MAPK) 15–19
  in yeast and MAPK cascades 16–17
  see also under Plants
Sugar, starch processing to 349–352
Sugar alcohols, in osmoprotection 442 *(MR)*
Superoxide dismutase 1 (SOD1) 323
Supporting structures, S-layers as 22–23, 24
Surface display, by bacteria 185–192
Surface plasmon resonance technique 353–359
  applications 356–357, 358
  microscopy 357–358
  principles 353–357
Surfactant, genes deleted in experimental model 87
Surfactin 119 *(MR)*
Swainsonine 29
Sweet potatoes, biotechnology application 337
Symbiosis, in deep-sea hydrothermal vents 242–243

T

Tandem mass spectrometry (MS/MS) techniques 418–425
  computerized search algorithms 421–423
  gel-based analysis 423–424
  shotgun identification of peptides/proteins 424
T cells
  cytokines produced 106
  development, abnormal in SHP-1 deficiency 305–306
  helper 106
    subtypes 106, 107

TECHNICAL TIPS ONLINE

Bags of free tips for molecular biologists

A unique online journal of peer-reviewed molecular biology techniques articles

http://www.elsevier.com/locate/tto
in Europe http://www.elsevier.nl/locate/tto

KEY FEATURES

- free to use
- coverage of: PCR, gene expression, cloning & sequencing, and much more
- discussion/feedback for all articles
- rapid publication
- **EMBASE/MEDLINE** abstracts
- information about products cited in articles
- new product information
